15
16 -- In this code:
17 -- Line strive to be 80 chars (or less)
18 -- Two spaces before function arguments denote optionals.
19 -- Four spaces before function arguments denote local variables.
20 -- Private functions start with '_'
21 -- Arguments of private functions do anything at all
22 -- Local variables inside functions do anything at all
23 -- Arguments of public functions use type hints
24 -- Variable 'x' is anything
25 -- Prefix 'is' is a boolean
26 -- Prefix 'fun' is a function
27 -- Prefix 'f' is a filename
28 -- Prefix 'n' is a string
29 -- Prefix 's' is a string
30 -- Prefix 'c' is a column index
31 -- 'col' denotes 'num' or 'sym'
32 -- 'x' is anything (table or number of boolean or string
33 -- 'v' is a simple value (number or boolean or string)
34 -- Suffix 'a' is a list of things
35 -- Tables are 't' or, using the above, a table of numbers would be 'ns'
36 -- Type names are lower case versions of constructors; e.g 'col' isa 'Cols'.
