```
1  -- In this code:
2  -- Line strive to be 80 chars (or less)
3  -- Two spaces before function arguments denote optionals.
4  -- Four spaces before function arguments denote local variables.
5  -- Private functions start with '_'
6  -- Arguments of private functions do anything at all
7  -- Local variables inside functions do anything at all
8  -- Arguments of public functions use type hints
9  -- Variable 'x' is anything
10 -- Prefix 'is' is a boolean
11 -- Prefix 'fun' is a function
12 -- Prefix 'f' is a filename
13 -- Prefix 'n' is a string
14 -- Prefix 's' is a string
15 -- Prefix 'c' is a column index
16 -- 'col' denotes 'num' or 'sym'
17 -- 'x' is anything (table or number of boolean or string)
18 -- 'v' is a simple value (number or boolean or string)
19 -- Suffix 'a' is a list of things
20 -- Tables are 't' or, using the above, a table of numbers would be 'ns'
21 -- Type names are lower case versions of constructors; e.g 'col' isa 'Cols'.
22
23 -- All the demo functions 'eg.fun1', 'eg.fun2', etc can be called via
24 -- e.g. 'lua eg.lua -e fun1'.
